4.5	100			
10.0	100			

Flow Rate: 0.4 mL/min Pressure: 280 bar Temperature: 40 °C Injection Volume: 7.0 μL Sample Solvent: Methanol Detection: +ESI MS/MS LC System: Shimadzu Nexera X2 ESI LCMS system: Shimadzu LCMS-8040

Mycotoxin contamination can have serious implications, including devastating economic losses, and human and animal death. It is imperative to successfully screen for these toxins to ensure the integrity of the food supply. Environmental analysis can be challenging due to matrix effects and interference, often resulting in low sensitivity and ambiguous results; therefore, it is critical to have a column that has superior performance. The HALO 90 Å PFP can not only meet these challenges, but exceed them by demonstrating high speed and sensitivity. The HALO 90 Å PFP is an ideal column to be used in environmental, and mycotoxin analysis.
